#### B. Is the project being prepared in a Situation of Urgent Need of Assistance or Capacity Constraints, as per Bank IPF Policy, para. 12?

No

#### C. Summary Description of Proposed Project [including overview of Country, Sectoral & Institutional Contexts and Relationship to CPF]

The proposed project will support the implementation of the Guinea COVID-19 Plan.

#### D. Environmental and Social Overview

D.1. Detailed project location(s) and salient physical characteristics relevant to the E&S assessment [geographic, environmental, social]

The Guinea COVID-19 Preparedness and Response Project (P174032) is an emergency operation that will be implemented nationwide. It will contribute to COVID-19 preparedness, monitoring, surveillance and response in Guinea. The project is expected to finance minor civil works that will be undertaken within existing facilities. These
works aim at improving services in healthcare facilities, laboratories and warehouses, and will be focused on rehabilitation and/or renovation of existing structures and the construction of some new buildings within existing premises. The project will also finance incinerators at hospitals. There will not be any land acquisition, physical/economic displacement or restriction of access to livelihoods. The project is not expected to have an impact on natural habitats or cultural sites.

In recent times Guinea has been going through social unrest (strikes, demonstrations) due mainly to proposed Amends to the Constitution. The apparent post-electoral calm could be interrupted by severe pressure from unions and other groups, which could paralyze business and other activities in the main urban centers in Guinea. The country has just shifted out of a fragility, conflict and violence context, but the risks of civil strife especially after the elections remain real. It is in this context that the current project will be implemented.

D. 2. Borrower’s Institutional Capacity

The Government of Guinea (GoG) has an acceptable legal and regulatory environmental and social framework, with a national agency called BGACE (Bureau Guinéen d’Audit et de Conformité Environnementale) which reviews and approves environmental and social assessments, as well as monitoring and evaluating the assessments. The GoG, including the Ministry of Health (MoH), has received capacity-building support through World Bank-financed projects on environmental and social risk management, including the requirements of the Environmental and Social Framework (ESF). However, capacity building is nevertheless required to enable BGACE to play its regulatory role more fully. The operation will be implemented by MoH using staff in the project coordination unit (PCU) of REDISSE-Phase III Regional Disease Surveillance Systems Enhancement-Phase III in Guinea - P147758. The MoH has implemented numerous World Bank (WB) funded projects in the health sector. REDISSE’s PCU has a full-time environmental specialist who receives regular guidance and support from WB environmental and social development specialists as part of the Bank’s supervision of the project. The REDISSE PCU has demonstrated its capacity to screen, implement, monitor and report on environmental and social commitments as part of WB-financed activities. COVID-19 poses a unique set of challenges for the country, especially with regards to taking immediate actions that need to be coordinated across a wide array of stakeholders over a broad geographic space. Meeting these challenges will strain the capacity of the REDISSE PCU. This will be the first ESF project for the MoH.

The project will finance, through Component 2, capacity building for the PCU to manage the environmental and social aspects of the project. MoH, as included in the Environmental and Social Commitment Plan (ESCP), will recruit a social development specialist into the PCU. Moreover, given the need for a comprehensive stakeholder engagement and communications strategy in the context of COVID-19 management, the MoH appoint to the PCU a communications specialist in the field of public health awareness and communication to be included on the project team at the beginning of project implementation.

II. SUMMARY OF ENVIRONMENTAL AND SOCIAL (ES) RISKS AND IMPACTS

A. Environmental and Social Risk Classification (ESRC) Substantial
Environmental Risk Rating

Although the main long-term impacts are likely to be positive, there are a number of short-term risks that need to be considered. The key environmental risks and impacts include: (i) environmental and community health related risks from inadequate storage, transportation and disposal of infected medical waste; (ii) occupational health and safety (OHS) issues related to the availability and supply of personal protective equipment (PPE) for healthcare workers and the logistical challenges in transporting PPE across Guinea in a timely manner; and (iii) community health and safety risks given close social contact and limited sanitary and hygiene services (clean water, soap, disinfectants) and isolation capabilities at healthcare facilities across Guinea. To mitigate these risks the MoH, will revise and update the Environmental and Social Framework (ESMF) for the REDISSE III project. The updated ESMF will contain updates on provisions for storing, transporting, and disposing of contaminated medical waste and outline guidance in line with international good practice and WHO standards on COVID-19 response on limiting viral contagion in healthcare facilities. The relevant parts of the WHO COVID-19 quarantine guidelines and COVID-19 biosafety guidelines will be reviewed so that all relevant occupational and community health and safety risks and mitigation measures will be integrated into the ESMF. The project will also support MoH in coordination with other partners to address logistical constraints in the timely provision of technical expertise, supplies, equipment and systems across the country by using information platforms to manage supply chains.

Other risks, including from small scale works, are moderate in nature and measures to manage them will also be included in the ESMF. Those risks are inter alia: dust, noise pollution, the absence of PPE, non-compliance with the physical distancing of employees, etc.

Social Risk Rating

The Social risk rating of the project is Substantial. A key social risk is that vulnerable social groups (poor, disabled, elderly, isolated communities, people and communities living far from the health facilities, etc.) may be unable to get access to facilities and services, which could increase their vulnerability and undermine the general objectives of the project. Other social risks include the rise of social tensions that could be exacerbated by the lack of awareness regarding the behavior change required to decrease transmission (physical distancing, hand washing and hygiene), stigma associated with victims of COVID-19 and their families, perceived exclusion from key health facilities and services and misinformation regarding how COVID-19 is transmitted and prevented. In addition, quarantine/isolation of patients may introduce other social challenges such as how to maintain dignified treatment of patients, attention to specific, culturally relevant concerns of vulnerable groups and prevention of Sexual Exploitation and Abuse (SEA) and Sexual Harassment (SH), as well as meeting minimum accommodation and servicing requirements. In addition, the planned activities may present risks to project workers – specifically, to health care workers potentially exposed to COVID-19 and more generally to project workers whose working conditions may be adversely affected due to the need to address the COVID-19 emergency. Based on these findings, the social risk rating of this project is Substantial.

B. Environment and Social Standards (ESSs) that Apply to the Activities Being Considered

B.1. General Assessment

ESS1 Assessment and Management of Environmental and Social Risks and Impacts

Overview of the relevance of the Standard for the Project:
This standard is relevant. This operation is being prepared as an emergency response using condensed procedures under the Fast Track COVID-19 Facility. The project will have overall positive environmental and social impacts as it will contribute to epidemic/pandemic preparedness, monitoring, surveillance and response, specifically with regard to combating transmission of COVID-19. However, there are also substantial environmental and social risks and impacts that will need to be assessed and managed through a risk-based approach during implementation. The primary risks identified during preparation include: (i) environmental and community health related risks from inadequate storage, transportation and disposal of infectious medical waste; (ii) OHS issues related to the availability and supply of PPE for healthcare workers and the logistical challenges in transporting PPE across the country in a timely manner; (iii) community health and safety risks given close social contact and limited sanitary and hygiene services (clean water, soap, disinfectants) and isolation/quarantine capabilities at health facilities across the country; (iv) possible risks around social exclusion for access to health facilities and services, especially for the poorest and most marginalized who have a limited ability to pay, people and communities in remote rural areas living far from health facilities and for the elderly or those with underlying medical conditions who would be most at risk in the event of a pandemic outbreak; and (v) risks for those receiving treatment for COVID-19 symptoms, including discrimination and SEA/SH risks for patients in quarantine.

To address these risks, the MoH, with support from the REDISSE project, will update its ESMF to provide clear guidance regarding the treatment of medical waste and the preparation of sub-project Environmental and Social Management Plans (ESMPs). The updated ESMF will also incorporate international protocols for community health and safety during a pandemic and measures to address SEA/SH. The ESMF will include a commitment by the MoH to provide services and supplies based on the urgency of the need in line with the latest data related to the prevalence of the cases. In addition, the ESMF will also screen and identify the risks related to contracting and/or using private and/or public security forces to provide protection for healthcare workers and at isolation/quarantine sites. The ESMF will provide guidance regarding how to address these risks according to the principles of proportionality and Good International Industry Practice (GIIP) and by applicable national provisions regarding civilian-military engagement, rules of conduct, training, equipping, and monitoring. The ESMF will be shared and consulted with stakeholders using the modified approach currently under preparation and publicly disclosed per the requirements of the ESF no later than 30 days after project effectiveness. Mitigation measures will be addressed in the ESMF and eventual Environmental and Social Management Plans (ESMPs).

More specifically the ESMF will:

i) Identify risks and potential environmental and social impacts and outline appropriate mitigation measures based largely on adopting WHO guidance, World Bank EHS Guidelines and other good international industry practices (GIIP). The ESMF will include an ESMP for renovation and rehabilitation works; Infection Prevention and Control and Waste Management Plan (IPC&WMP) for all facilities including laboratories, medical centers and isolation centers; Labor Management Procedures (LMP) for the PCU and contracted workers to ensure proper working conditions and management of worker relationships, occupational health and safety, and to prevent sexual exploitation and abuse and sexual harassment. The ESMF will be prepared to a standard acceptable to the Bank and disclosed on the REDISSE Phase III website and on the World Bank website no later than 30 days after the Effectiveness Date. Until the ESMF has been approved, the project will follow current WHO Guidance and avoid activities such as establishment of isolation units and treatment facilities at scale.

ii) Include a Stakeholder Engagement Plan (SEP) (and Grievance Redress Mechanism) – establishing a structured approach for community outreach and two-way engagement with stakeholders – in appropriate
languages, that includes vulnerable and disadvantaged groups (poor, disabled, elderly, isolated communities.). The SEP will be based upon meaningful consultation and disclosure of appropriate information, considering the specific challenges associated with public meetings as a result of COVID-19. A preliminary SEP including GRM has been prepared and will be updated by the PCU and re-disclosed no later than 30 days after the Effectiveness Date.

To achieve the above mentioned positive environmental and social impacts, the aforementioned areas of risks must be addressed and mitigated as discussed below:

Medical Waste Management and Disposal: Wastes that may be generated from labs, screening posts and treatment facilities to be supported by the COVID-19 readiness and response could include liquid contaminated waste (e.g. blood, other body fluids and contaminated fluid) and infected materials (water used; lab solutions and reagents, syringes, bed sheets, majority of waste from labs and isolation centers, etc.) require special handling and awareness, as they may pose an infectious risk to healthcare workers in contact with the waste. Informal disposal may lead to contamination of soil and groundwater, but more importantly, to further spreading of the virus to nearby communities. Fortunately, Guinea has solid waste management strategy and legislation to manage waste in the country. The REDISSE Phase III project is financing incinerators in the country. In order to continue mitigating the risks associated with medical waste management and disposal, the project will invest in the procurement of appropriate waste management infrastructure, PPE, incinerators, as well as training of medical, laboratory and waste management personnel to ensure compliance with the IPC&WMP, WHO guidance and GIIP. This will be documented in the ESMF in the IPC&WMP.

Worker Health and Safety: Workers in healthcare facilities are particularly vulnerable to contagions like COVID-19. Healthcare-associated infections due to inadequate adherence to occupational health and safety standards can lead to illness and death among health and laboratory workers. The IPC&WMP will contain detailed procedures, based on WHO guidance, for protocols necessary for treating patients and handling medical waste as well as environmental health and safety guidelines for staff, including the necessary PPE. Proper disposal of sharps (see medical waste above), disinfectant protocols, and regular testing of healthcare workers will be included.

Community Health and Safety: All project activities ranging from the operation of laboratories to community engagement activities present a risk of transmission in the community. The operation of laboratories, health centers (including isolation facilities) have a high potential of carrying micro-organisms that can infect the community at large if they are not properly managed and controlled. The project’s ESMF will outline procedures for each project activity commensurate to the risk. The IPC&WMP being developed will contain detailed procedures, based on WHO guidance, for the operation of health facilities.

Vulnerable Groups Access to Project Services and Facilities: A key social risk related to this kind of an operation is that marginalized and vulnerable social groups are unable to access facilities and services designed to combat the disease, in a way that undermines the central objectives of the project. Real or perceived inequities also have the potential to lead to conflict and civil unrest. To mitigate this risk REDISSE Phase III, the project will commit to the provision of services and supplies based on the urgency of need, in line with the latest data related to the prevalence of the cases.

Sexual Exploitation and Abuse/Sexual Harassment (SEA/SH): Guinea has high background rates of SEA/SH. The project will include a large workforce of health care workers (direct, contract and community workers). SEA/SH risks will be
assessed and addressed during implementation through the ESMF, including screening and putting in the corresponding measures to prevent and mitigate the SEA/SH risks. The MoH will commit to the implementation of the WHO Code of Ethics and Professional Conduct which includes provisions for SEA/SH prevention.

ESS10 Stakeholder Engagement and Information Disclosure

The SEP will provide guidance on how to effectively engage citizens, develop culturally appropriate adaptations regarding behavior change, seek stakeholders’ inputs regarding project activities and provide relevant information to all stakeholders. The SEP will be complemented by a strong and well-articulated communication strategy on COVID-19 as part of project design, which will not only help with the implementation of the community mobilization and behavioral change objectives of the project, but also help minimize the circulation of false information regarding COVID-19, ensure equitable access to services, and counteract the isolation and uncertainty that comes with people in isolation/quarantine.

A draft SEP has been prepared and it outlines the main characteristics and interests of the relevant stakeholder groups, timing and methods of engagement throughout the project lifecycle as well as an outline for the establishment of a project Grievance Redress Mechanism (GRM). After project approval and no later than 30 days after project effectiveness, the SEP will be updated to include more detailed information regarding the methodologies for information sharing, more robust stakeholder mapping and identification of existing community-based platforms that can be used to facilitate effective community engagement and participation as well as the monitoring and evaluation plan. The SEP will identify in more detail the roles and responsibilities of religious leaders, traditional chefs, local elected people and NGOs, including the organization of traditional healers as important stakeholders with specific roles to play in project implementation and implementation of the SEP. The SEP will include a methodology to address: the possible social implications of supporting strict physical distancing and isolation measures as a first step in slowing down the infection rate and to prevent overwhelming the already overstretched health system; prevention of social tensions, especially in the vicinity of quarantine facilities and isolation units over the spread of disease and waste management; conflicts that could result from the circulation of false information/rumors; risks related to the use of security personnel to protect the construction of isolation facilities; and developing conditional measures to support affected households and vulnerable groups.

B.2. Specific Risks and Impacts

A brief description of the potential environmental and social risks and impacts relevant to the Project.

ESS2 Labor and Working Conditions

This standard is relevant. Many activities supported by the operation will be conducted by (healthcare and laboratory workers) and will include both the treatment of patients as well as the assessment of patient samples. The project workforce is expected to include (i) direct workers including civil servants and consultants engaged directly by the REDJSE-Project (i.e. project management personnel, medical staff etc.); and (ii) contracted workers employed or engaged through third parties such as UN agencies and NGOs (i.e. training and service providers), including those to
do the minor civil works. The key risk for them is the possible COVID-19 infection. OHS measures as outlined in WHO guidelines will be captured in the updated ESMF. This includes procedures for monitoring entry into healthcare facilities, including minimizing visitors and undergoing strict checks before entering; procedures for protection of workers in relation to infection control precautions; provision of immediate and ongoing training on the procedures to all categories of workers, and post signage in all public spaces mandating hand hygiene and PPE; ensuring adequate supplies of PPE (particularly face masks, gowns, gloves, hand-washing soap and sanitizes); and generally ensuring adequate OHS protections in accordance with the general and industry specific EHSGs and consistent with the evolving international good practice in relation to COVID-19 protection.

The GoG, via the ESCP, has committed to the preparation of LMP as part of the ESMF which (i) respond to the specific health and safety issues posed by COVID-19, and (ii) protect workers’ rights as set out in ESS2. Health and safety issues associated with project financed activities will be managed through the ESMF which will incorporate the WHO guidance tools for COVID-19 preparedness and response including the Risk Communication Package for Healthcare Facilities which provides healthcare workers (HCWs) and healthcare facility management with the information, procedures, and tools required to safely and effectively work. The MoH will also establish a labor GRM to address worker complaints which will be included in the LMP.

In accordance with ESS2 and Guinea law, due to the hazardous work situation, children under the age of 18 will not be allowed to work on the project. The use of forced labor or conscripted labor on the project is also prohibited.

**ESS3 Resource Efficiency and Pollution Prevention and Management**

This standard is relevant. Pollution prevention and management, specifically medical waste management will be a particularly important activity under the Project. Medical waste, including chemicals, contaminated PPE and equipment, and lab testing kits from healthcare facilities will need to be safely stored, transported and disposed. Waste management in general is a big challenge in Guinea due to limited authorized disposal sites, and contaminated medical waste is of special concern. The ESMF of the project will include Medical Waste Management procedures that integrate WHO COVID-19 guidance and other international good practices in order to prevent or minimize contamination from inadequate waste management and disposal.

Wastes that may be generated from labs, screening posts and treatment facilities to be supported by the COVID-19 readiness and response could include liquid contaminated waste (e.g. blood, other body fluids and contaminated fluid) and infected materials (water used; lab solutions and reagents, syringes, bed sheets, majority of waste from labs and isolation centers, etc.) require special handling and awareness, as they may pose an infectious risk to healthcare workers in contact with the waste. Informal disposal may lead to contamination of soil and groundwater, but more importantly, to further spreading of the virus to nearby communities. Fortunately, Guinea has solid waste management strategy and legislation to manage waste in the country. The REDISSE Phase III project is financing incinerators in the country. In order to continue mitigating the risks associated with medical waste management and disposal, the project will invest in the procurement of appropriate waste management infrastructure, PPE, incinerators, as well as training of medical, laboratory and waste management personnel to ensure compliance with the IPC&WMP, WHO guidance and GIIP. This will be documented in the ESMF in the IPC&WMP.
ESS4 Community Health and Safety

This standard is relevant. Community health and safety risks identified during preparation include: (i) environmental and community health related risks related to the inadequate storage, transportation and disposal of infectious medical waste; (ii) community health and safety risks given close social contact and limited sanitary and hygiene services (clean water, soap, disinfectants) and isolation/quarantine capabilities at healthcare facilities across the country (WHO guidelines); (iii) possible risks around social exclusion related to access to healthcare facilities and services, specially for the poorest and most marginalized who have a limited ability to pay, those living far from health facilities and for the elderly or those with underlying medical conditions who would be most at risk in the event of a pandemic; (iv) risks for those receiving treatment for COVID-19 symptoms, including discrimination and SEA/SH risks for patients in quarantine; (v) sociopolitical risks specifically related to the recent elections on the draft Constitution within the country; and (vi) low trust in the government which could lead to the rejection of public health interventions and information and violence against those providing services.

The project may recruit public or private security to guard and protect project sites. The project will ensure that the security personnel follow a strict code; the ESMF will lay out measures for security personnel. It is not likely to employ military personnel for civil works, but if the situation changes, the project will undertake a Security Risk Assessment (SRA) to review the military’s rules of engagement with civilian authorities and identify the specific risks related to providing increased security at the various project sites. The project would then propose adequate mitigation measures, and strengthen existing measures, where necessary, to ensure that the use of the military in project activities will not result in adverse consequences to community health and safety, including in matters relating to SEA/SH. In case other project activities are supported or implemented by security forces personnel, it will be ensured that the security personnel follow a strict code of conduct and avoid any escalation of situation, taking into consideration the protocols included in the ESMF and SEP, and the guidance provided in the World Bank technical note, “USE OF MILITARY FORCES TO ASSIST IN COVID-19 OPERATIONS SUGGESTIONS ON HOW TO MITIGATE RISKS”.

The project will promote the avoidance of SEA/SH by relying on the WHO Code of Ethics and Professional Conduct for all workers in the quarantine facilities as well as the provision of gender-sensitive infrastructure such as segregated toilets and enough light in quarantine and isolation centers.

The risks and mitigation measures will be addressed in the ESMF, drawing on input from project stakeholders, as documented in the SEP.

ESS5 Land Acquisition, Restrictions on Land Use and Involuntary Resettlement

This standard is not relevant. The project will not require any land acquisition leading to physical or economic displacement. All rehabilitation/renovation and construction will take place within existing health facilities.
ESS6 Biodiversity Conservation and Sustainable Management of Living Natural Resources
This standard is not relevant. No adverse impacts on natural resources or biodiversity are anticipated as a result of project activities. No adverse impacts on natural resources or biodiversity are anticipated as a result of project activities.

ESS7 Indigenous Peoples/Sub-Saharan African Historically Underserved Traditional Local Communities
This standard is not relevant. There are no Indigenous Peoples/Sub-Saharan African Historically Undeserved Traditional Local Communities in the project area.

ESS8 Cultural Heritage
This standard is not currently relevant. It is not anticipated that the project will impact cultural heritage and any physical works planned in the context of the project will be limited to rehabilitation or upgrading of existing facilities and some new constructions in existing sites. However, the planned works will include excavation during construction phase and demolition during the rehabilitation of some infrastructures. The ESMF will include a “chance finds” procedure which will require contractors to stop construction/rehabilitation if cultural heritage sites are encountered during civil works.

ESS9 Financial Intermediaries
This standard is not relevant.

C. Legal Operational Policies that Apply

OP 7.50 Projects on International Waterways
The project is not expected to affect international waterways.

OP 7.60 Projects in Disputed Areas
The project is not located in Disputed Areas.

III. BORROWER’S ENVIRONMENTAL AND SOCIAL COMMITMENT PLAN (ESCP)

<table>
<thead>
<tr>
<th>DELIVERABLES against MEASURES AND ACTIONs IDENTIFIED</th>
<th>TIMELINE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The REDISSE III ESMF will be updated, consulted upon and re-disclosed in country no later than 30 days after Project effectiveness. It will be implemented during the project lifecycle and specific ESMPs will be prepared and implemented overtime.</td>
<td>06/2020</td>
</tr>
<tr>
<td>The ESCP was prepared on April 20, 2020. It will be disclosed within the country prior to approval. The activities included will be implemented during the project lifecycle.</td>
<td>06/2020</td>
</tr>
</tbody>
</table>
A Social Development Specialist will be hired to work within the PIU not later than three months after the Project Effectiveness.  

A communications specialist from the MoH will be assigned to support the project no later than 30 days after project Effectiveness.

### ESS 10 Stakeholder Engagement and Information Disclosure

A preliminary SEP was prepared on April 20, 2020 and shall be disclosed prior to approval. It will be updated no later than 30 days after the Project effectiveness to include further details and implementation arrangements.

### ESS 2 Labor and Working Conditions

The Labor Management Plan (LMP) to be included in the ESMF will be prepared no later than 30 days after Project effectiveness.

### ESS 3 Resource Efficiency and Pollution Prevention and Management

Considered under the ESMF (with medical waste management plan).

### ESS 4 Community Health and Safety

Considered under the ESMF and SEP.

### ESS 5 Land Acquisition, Restrictions on Land Use and Involuntary Resettlement

Not Applicable

### ESS 6 Biodiversity Conservation and Sustainable Management of Living Natural Resources

Not Applicable

### ESS 7 Indigenous Peoples/Sub-Saharan African Historically Underserved Traditional Local Communities

Not Applicable

### ESS 8 Cultural Heritage

Considered under the ESMF that will include "chance find" procedure.

### ESS 9 Financial Intermediaries

Not Applicable

B.3. Reliance on Borrower’s policy, legal and institutional framework, relevant to the Project risks and impacts
